Hi Lopa,

We had a good meeting with JEMBI today. They seemed to think that because of our set up, it should be relatively easy to support us with the upgrades which is great news. Basically, the plan is:

1. FHI will share:
 - a. A clear explanation of data flow for our two models (district and provincial)
 - b. List of central servers (district and provincial; district are only in Zambézia—the other provinces have servers)
 - c. List of sites where we have EPTS and for each:
 - i. Number of site level servers
 - ii. Number of other computers that will need to be reconfigured
 - d. Our thoughts on how best to do this
2. JEMBI will work with us over the next weeks (before mid-October) to develop scripts, document processes to be used during implementation, do test runs, and develop solutions to any problems that arise. This work will take place in Maputo at the FHI office to the extent possible. No upgrades can actually happen until after the 15th as we will be reporting. Even that is ambitious from the M&E side. If we can buy more time, that would be better (we did not discuss that more time would be better in the meeting).
3. Depending on that work, we will jointly determine needs at the provincial level. The actual upgrade process will take place at the provincial level. JEMBI will be available, if needed, to travel to the provinces to provide support.
4. The aim is to complete the upgrades by 20 December at the latest.

Next steps:

1. We will share the above info
2. JEMBI will share a proposed timeline
3. Elisio will meet with JEMBI next Wednesday to ensure that he did not miss any details due to the poor connection

Maria and Zainabe, please correct anything that is incorrect in the above.

This all sounds great and I hope it will work out as smoothly as the discussion, although based on past experience, we should expect some issues to arise!

Best, E

Thanks for putting this notes together Elizabeth.

I am Ccing here my team in case they wanna add something.

We will be working on the plan for the next days and next week we will have Elisio and Paulo meeting more technically to ensure it is a good plan.

Appreciatively,

Zainabe Dadá

I think most the work is already reflectwd on the EPTS plan that we developed just need to ad a few lines for rhe implementation plan.
@Wayne aand Michele what do you think? You wanna make a different plan?

At the momento we can make some rough estimates as we didn't receive yet the detailed information on sites from FHI as well as we don't have clear yet what are going to be the practical modalities of implementation of the FHI upgrade (how many "groups" of computers to be configured at the same time, where and when this is going to happen etc..).

I will include some information in the high level plan.
